

# Endpoint Management

We think of our Endpoint Management services as responding to and supporting users and their devices while performing regular maintenance to ensure reliability. Typically, this means laptops, desktops, workstations, smartphones, tablets and more.

## MALWARE & RANSOMWARE

Multi-Layered approach is used for endpoint protection to reduce the chances of a successful attack

## REMOTE WORKERS SUPPORTED

Protection, support, and management for users in the office is extended to those working from home; allowing for your business to stay in operation

## SLA AND AUDITS

Our management solutions provide Service Level Agreements and conduct monthly audits to ensure your systems remain in good health and have minimal outages

## ALERTS & TICKETS

When problems are detected, our systems will attempt to resolve the issue by leveraging AI and alert our team if unresolved.

## PATCH MANAGEMENT

Your systems will be updated when patches are available to keep your systems secure and functional

## REMOTE MONITORING & MANAGEMENT

Managed devices will be monitored for trouble and maintained to ensure their availability and reliability

## KEY FEATURES

AI and behavioral-based

Automated repairs

24/7/365 Support
